

Bluespring Software is a leading provider of human-centric Business Process Management Suite (BPMS) software.

Bluespring Software helps companies improve those processes that involve work done by people. The Company's flagship product, BPM Suite, is built on a Microsoft .Net, Service-Oriented Architecture (SOA). BPM Suite, currently on its 18th release, sets itself apart on process agility & ease-of-use.

Bluespring's BPM Suite is currently deployed in a multitude of industries, including Manufacturing, Healthcare & Life Sciences, Government, Retail, Financial Services, Telecommunications, Property Management, Utilities and Professional Services. Companies purchase BPM Suite to tighten "internal controls," eliminate expense, add scale and gain enterprise-wide visibility over processes that span multiple systems and a healthy dose of manual activity. Some of our customers realize immediate ROIs and it is not unheard of to see a marked improvement as high as 1,000% over the pre-BPMS benchmark.

Bluespring Software is a privately held company based in Cincinnati, Ohio. Founded in 1998, Bluespring has for almost 10 years delivered solutions for complex business process problems. The company is a Microsoft Gold Managed Partner and markets its products through a network of global and regional business partners. Additional information about Bluespring Software can be found at <http://www.bluespringsoftware.com>
